

RACK SECURITY CAGING SOLUTIONS

ST-Security Caging Solutions are custom designed and built to provide a high-level security environment for server rooms and co-location data center.

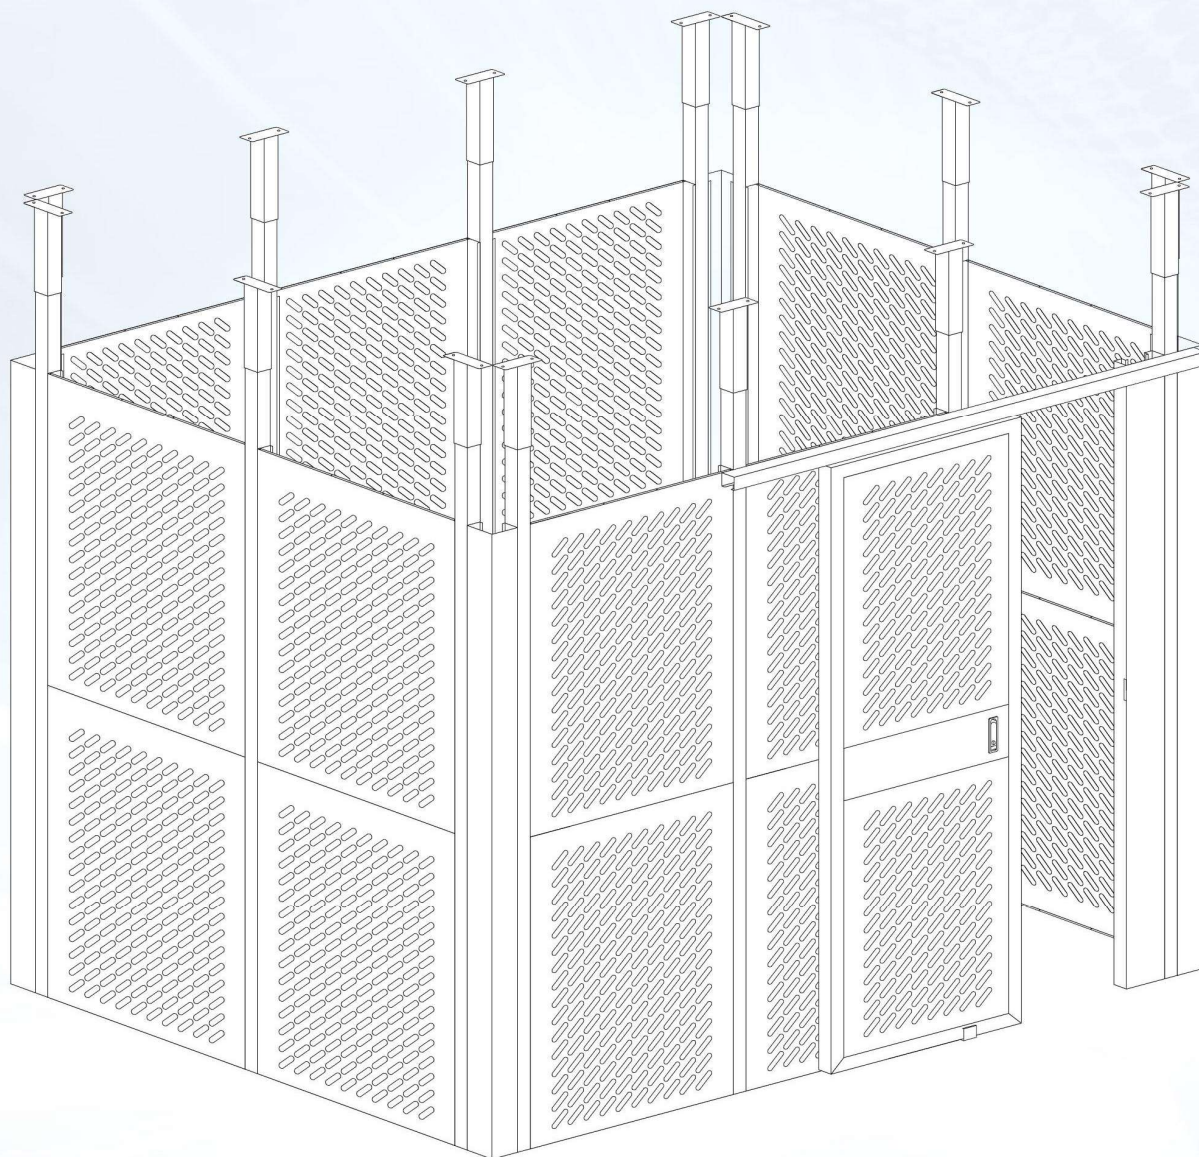

The security of equipment are particularly within facilities servicing multiple users, can be controlled with a ST-Security Cage wall solution. Strong construction maintains security integrity and offers increased visibility and airflow. The modular design provides flexibility and allowing for easy assembly with enabling future expansion.

Our solutions entry options include swinging or sliding doors, manufactured to specific widths. ST-Caging utilises concealed fixings from the secure wall side. ST-will provide a quote based on your described solution such as size of the cage and preferred door size, style, location and lock.
